DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on May 9, 2008 has been entered.

Copy of Claims

The status identifiers of claims 68-71 is incorrect. The claims are not original claims. They are new or previously presented claims.

Claim Objections

Claim 70 is objected to because of the following informalities:

A spelling error exists in line 2. It is suggested to change, "lest" to --least--. Also, the end of the claim does not end in a period. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States. Art Unit: 3738

Claims 68-71 are rejected under 35 U.S.C. 102(b) as being anticipated by Burmeister (EP 0 759 730 B1, cited previously). Burmeister discloses an in vivo sensor device (30; seen in fig.3) comprising a plurality of structural elements (struts, configuration of stent 30 examples seen in figs.8-11; P0049) defining the device, the structural elements (struts) composed of a first material (austenite shape memory material 32) having either a transitional temperature or coefficient and at least one region (outer surface region; see fig.3) of the structural elements composed of a second material (martensite superelastic material 34) having a transitional temperature or coefficient higher than the first material (see fig.4a, 4b showing transitional temperature greater for material 34; P0029, P0032), the geometry or conformation capable of changing (expansion seen in figs.8b, 9b, 10b, 10d, 11b; P0036) upon application of a force (heat, pressure, etc). Burmeister discloses the first material to comprise a shape memory material and the second material to comprise a superelastic material, wherein the second material has a higher martensite transition temperature (see fig.4b compared to fig.4a).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
